Conformity Assessment Centre

The Conformity Assessment Centre (CAC) was established at the Royal Scientific Society (RSS) in 2005 and currently comprises of the Inspection Division and the Conformity Certification Division.

Our centre inspects a wide range of products in order to ensure the safety and quality of consumer goods and their abidance to national and international standards. By improving the competitiveness of products and reducing technical barriers to trade, our centre plays a vital role in boosting the national economy and increasing exports.

Our centre is accredited internationally by the Hellenic Accreditation System (ESYD) according to ISO 17020.

What we do:

- Inspect installations and systems to assure safety and compliance with pre-set standards, which include polyethylene pipes, iron pipes, liquefied petroleum gas (LPG) tanks and gas systems, lifting tackles and overhead cranes
- Issue inspection certificates to manufactured and exported products that meet national and/or international standards

Facts about our centre:

- We issue more than 700 conformity certificates annually
- Our centre is authorised by the Ministry of Water as a third party inspection body for all of its water pipes projects
- Our centre is authorised by the Energy & Minerals Regulatory Commission and the Jordan Petroleum Refinery as a third party inspection body for all LPG projects and installations
